

Micro Material

Easy Cast EC500 M

EnvisionTEC's innovative direct investment casting material, Easy Cast EC500 M for use on the Perfactory® Micro and Perfactory® Micro Advantage model makers. With 30% faster build times and dramatically improved casting abilities, EC500 M is the answer you have been waiting for to give you a competitive advantage in the jewelry manufacturing market. The EC500 M material produces the highest resolution with the crispest detail without sacrificing speed and accuracy. EC500 M has a melting point of 250 degrees C, and zero ash content on complete burnout which makes it cast as easily as any injection wax pattern.

Recommended Machines

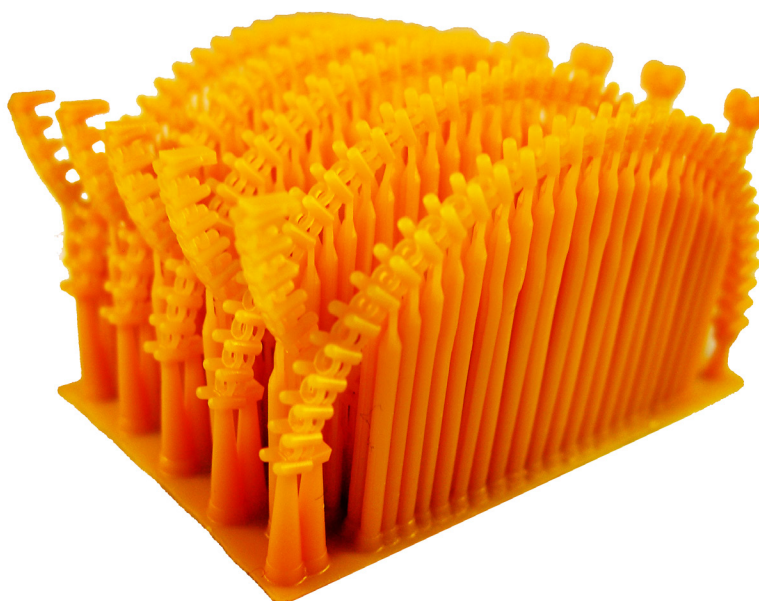

Perfactory® Micro, Perfactory® Micro Advantage, Perfactory® Micro EDU

Applications

Jewelry, MCAD

Material Properties

- » Improved speed when compared to PIC and WIC series - 4.5 seconds at 25 microns versus 7.5 seconds for PIC and WIC
- » Crisp detail with super smooth surfaces
- » Faster post curing times - less than 10 minutes
- » Opaque yellow to show fine feature details
- » Achieve superior surface quality for your metal investment castings by using EC500 in combination with most investment powders.
